GREEN DISTILLATION TECHNOLOGIES Corporation Limited

RE: Letter of Support - GREEN DISTILLATION TECHNOLOGIES Corporation Limited

Dear Sir,

The Goodyear Tire & Rubber Company is a global manufacturer of tires and provider of tire services based in Akron, Ohio.

Goodyear is seeking new innovations in rubber reinforcing materials technology. We are interested in sustainable technology developed by GREEN DISTILLATION TECHNOLOGIES for the production of recycled materials for tire applications. This technology may offer an opportunity to reduce emissions of greenhouse gases in tire materials manufacturing. It may meet Goodyear's goal for using environmentally friendly and sustainable materials in our products and fit into Goodyear's Better Future corporate responsibility framework.

Goodyear supports this initiative to complete an in-depth life cycle assessment and techno-economic analysis of GREEN DISTILLATION TECHNOLOGIES technology. This effort may help to further the understanding and potential of GREEN DISTILLATION TECHNOLOGIES technology as a viable option for the supply of sustainably produced materials to Goodyear. We are interested in continuing our support of this technology development through the evaluation of GREEN DISTILLATION TECHNOLOGIES products in our tire compounds.

Best regards,
