

A candle loses nothing by lighting another candle.

Working with light is a complex art. Lighting effects and how they are perceived by the human eye can be a very tricky exercise. If you succeed, lighting effects can dramatically change the entire look and feel of a product.

As the race for product differentiation continues, a formidable tool in a designer's toolbox is the proper use of lighting effects. C2P uses imagination and creative sensibilities to explore new ways of working with light.

Any company can litter a PCB with surface mount LEDs. The skill lies in creating more with less.

C2P full turnkey:

-  Industrial Design
-  CAD
-  Engineering and Prototyping
-  Electronics Design
-  Tooling
-  Manufacturing and Supply
